

ADVANCING ONCOLOGY THROUGH HIGH-END NGS TESTING

Next-Generation Sequencing Solutions for Cancer Diagnostics

OUR VISION

Transforming precision oncology through accessible, high-resolution genomic diagnostics. We aim to empower oncologists and clinicians worldwide with actionable, comprehensive molecular insights that guide individualized patient care and improve clinical outcomes across all tumor types.

High-End NGS

Deep sequencing coverage enabling accurate detection of rare & sub-clonal variants.

Pan-Cancer Panels

Broad comprehensive genomic profiling for therapy matching and biomarker discovery.

Rapid Turnaround

Streamlined clinical workflow delivering actionable insights in record time.

OUR DIAGNOSTIC PANELS

#	PANEL NAME	TEST COVER	SAMPLE TYPE	TAT
1	Somatic Whole Exome Sequencing	NGS-All Human ~23000 genes (300x coverage)	FFPE Tissue Block	16 Days
2	Somatic Comprehensive Genomics Profiling (MSI+TMB+HRD)	NGS-1080 DNA Genes +104 fusion partners MSI+TMB+HRD	FFPE Tissue Block	16 Days
3	Somatic Lung Gene panel	126 Genes and MSI	FFPE Tissue Block	16 Days
4	Somatic Pan-Solid Tumour Panel	126 Genes and MSI	FFPE Tissue Block	16 Days
5	Somatic Sarcoma Gene Panel	NGS-571 DNA Genes + 2660 RNA fusion partners, TMB and MSI	FFPE Tissue Block	16 Days
6	Somatic Endometrium Panel	51 HRR Genes	FFPE Tissue Block	16 Days
7	Somatic Targeted Lung cancer Gene Panel	12 Genes	FFPE Tissue Block	16 Days
8	Somatic Targeted Breast Cancer Gene Panel	25 Genes	FFPE Tissue Block	16 Days
9	Somatic Targeted Colorectal Cancer Gene Panel	(41genes + 11 MSI Markers)	FFPE Tissue Block	16 Days
10	Somatic Targeted Ovarian Cancer Gene Panel	26 Genes	FFPE Tissue Block	16 Days
11	Somatic Targeted endometrium Cancer Gene Panel	34 Genes	FFPE Tissue Block	16 Days
12	Somatic 96hrs Solid Tumour Panel (Oncomine Precision Assay)	50 key oncology genes Pan Cancer	FFPE Tissue Block or 10ml Blood in Streck Tube/ CSF or Pleural Fluid in EDTA Tube	4 Days
13	Somatic 96hrs Myeloid Panel (Oncomine Myeloid Assay)	DNA Panel: Hotspot Gene (23) Full Gene (17) RNA Panel: Expression Gene (5) Expression Control Gene (5) Fusion Driver Gene (29)	3ml Bone marrow Aspirate in EDTA Tube	4 Days

OUR DIAGNOSTIC PANELS

#	PANEL NAME	TEST COVER	SAMPLE TYPE	TAT
14	Somatic Comprehensive Leukaemia Panel (ALL/AML)	NGS-98 DNA Genes + 119 RNA Fusions	3ml Bone Marrow Aspirate in EDTA Tube	16 Days
15	Comprehensive Pan- Liquid Biopsy (CtDNA)	126 Genes and MSI	10ml Blood in Streck Tube/ CSF or Pleural Fluid in EDTA Tube	16 Days
16	Germline Oncomine BRCA 1 and BRCA2	BRCA 1 and BRCA2 - Full Gene	Whole Blood in EDTA Tube	16 Days
17	Germline Whole Exome Sequencing	NGS-All Human ~23000 genes (100x coverage)	Whole Blood in EDTA Tube	16 Days
18	Germline Comprehensive Hereditary Gene Panel	74 Genes	Whole Blood in EDTA Tube	16 Days
19	Germline BRCA 1 & 2 deletion/duplication by MLPA	BRCA 1 and BRCA2 - Full Gene	Whole Blood in EDTA Tube	10 Days
20	PCR- EGFR Mutation Panel	Exon 18 19 20 21-Hotspots	FFPE Tissue Block or 10ml Blood In Streck Tube	2 Days
21	PCR- KRAS Mutation Panel	Exon 2 3 &4 -Hotspots	FFPE Tissue Block	2 Days
22	PCR- NRAS Mutation Panel	Exon 2 3 &4 -Hotspots	FFPE Tissue Block	2 Days
23	PCR- BRAF Mutation Panel	Exon 15 V600E	FFPE Tissue Block	2 Days
24	PCR- DPYD Mutation Panel	DPYD*2A/DPYD*13/D949V/IVS10 /DPYD*6	Whole Blood in EDTA Tube	2 Days
25	PAM 50 -BREAST CANCER PROGNOSTICATION ASSAY	PAM50, Tumour Inflammation Signature (TIS), Risk of Recurrence (ROR)/Genomic Risk-776 (Human), including internal reference genes	FFPE Tissue Block	21 Days

Precision Oncology & Genomic Diagnostics

Comprehensive biomarker profiling and clinical decision support designed for personalized cancer therapy.

Comprehensive Solid Tumor Profiling

- Multi-gene Next-Generation Sequencing (NGS) panels targeting actionable driver mutations.
- Detects key single nucleotide variants (SNVs), indels, copy number variations (CNVs), and gene fusions.
- Guides precision treatment access tailored to tumor molecular profile.

Liquid Biopsy & ctDNA Analysis

- Non-invasive, blood-based genomic profiling for circulating tumor DNA.
- Enables early detection and ongoing treatment response tracking.
- Minimal Residual Disease (MRD) monitoring for early relapse detection.

Hereditary Cancer Screening

- Targeted germline panel testing for inherited predisposition genes (e.g., *BRCA1/2*, Lynch syndrome).
- Comprehensive risk assessment for familial cancer syndromes.
- Empowers proactive screening and risk-reduction strategies.

Hematologic Malignancy Panels

- Specialized genomic profiling panels for leukemia, lymphoma, and myeloma.
- Informs risk stratification, diagnosis, and targeted regimen selection.
- Monitors clonal evolution throughout therapeutic interventions.

Bioinformatics & Clinical Decision Support

Our proprietary pipeline matches identified variants with key open clinical trials, FDA-approved targeted therapies, and guidelines to generate clear, actionable reports for oncologists and tumor boards.
